Orchestrate Your Business Workflows
Tidal Enterprise Integrations
With Tidal Workload Automation

The Tidal Enterprise Integrations portfolio helps expand the reach, impact, and strategic value of your Tidal Automation™ platform. Our ready-to-run integrations connect your Tidal platform to many of today's popular business applications and IT systems so you can quickly design and automate complex cross-application, cross-platform workflows.

Tidal's integrations are ready when you are.

Meet the business mission.
Extend and expand your Tidal Automation™ capabilities, using Tidal integrations to orchestrate mission-critical workloads across ERP, BI, Big Data, and other business workflows.

Get more out of Tidal.
Multiply the value and ROI of your Tidal investment with easy-to-budget, easy-to-deploy agents and adapters.

It's fast and easy.
We've done the work so you don't have to. Simply add new integrations to your Tidal ecosystem as needed.

Our comprehensive ready-to-run integrations make Tidal extensible with rapid access to virtually any system, middleware, and application structure, and no error-prone scripts to write or maintain.

Our SSH and Web Services adapters allow developers to easily merge Tidal into in-house programs, and Tidal can be embedded directly into business processes and applications with our full REST APIs. The Command Line Interface provides convenient integration into not-yet-supported enterprise processes. Connecting with your critical systems is fast and easy – whether you're running on-prem, in a private cloud, or any hybrid combination.

We've meticulously designed uniform screens across all integrations to maintain a consistent user experience, lower the learning curve for users, and help users adopt and quickly gain competence with the system.

It's easy to get started with any Tidal Enterprise Integration. We offer free training materials online and a great support team if you have questions.
